```
The invention relates to a method of determining whether a test compound cc modulates the drug resistance of a cell that comprises determining the cexpression or activity level of resistance genes (e.g. semaphorin p. B94, cc expression, 2493, proliferin or maspin) in a cell in the presence of the test compound, and comparing its expression or activity level in a cell without the test compound. The drug resistant sequences are useful cc in identifying drug resistant cells, in screening methods directed to the cell without the cell types. In screening methods directed to the cc cell type or multiple cell types. An isolated resistance protein can be cc cell type or multiple cell types. An isolated resistance protein activity level in a spend therapy vectors. An anti-resistance that bind the resistance cc cas gene therapy vectors. An anti-resistance that bind the resistance cc as gene therapy vectors. An anti-resistance protein antibody may be used cc as isolate a resistance protein cells and of recombinantly produced cc resistance protein expressed in host cells. The methods are useful for cc treating a subject having a disorder, such as a drug-resistance cancer, cc characterized by abstrant resistance sequence expression or activity by characterized by abstrant resistance sequence expression or activity by capacity and the subject a resistance modulator. The present sequence cc drug resistant EMT6 tumours

                                                                                                                                                                                                                                                                                                        medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune regulating (e.g. as vaccines) or suppressing activity, haematopolesis chemotactic/chemokinetic activity, haematopolesis activity, receptor/ligand activity, anti-inflammatory activity, cadharin/tumour invasion suppressor activity, and tumour inhibition gene therapy. A host cell transfected with the polynucleotide sequences are also stated to be useful for encoding human semaphorin E or its subfragments and variants is useful for recombinant production of the clone BR5334 related protein.
                                                                                                                                                                                                                                                                                Sequence 2975 BP; 887 A; 620 C; 665 G; 802 T; 1 other;

The present sequence was isolated from a human foetal kidney cDNA library. present sequence was isolated from a human foetal kidney cDNA library. In the BR53_4 protein is a secreted protein and can be used to treat a number of conditions including various immune deficiencies and disorders, number of conditions autoimmune disorders, allergic reactions such as microbial infections, autoimmune disorders, allergic reactions such as asthma, respiratory problems, inflammation, myeloid or lymphoid cell asthma, respiratory problems, inflammation, myeloid or lymphoid cell deficiencies, anaemias, burns, wound healing, ulcers, periodontal deficiencies, central and peripheral nervous system diseases and neuropathies, lung or liver fibrosis and cancer.

The invention relates to novel human secreted proteins (NHP) that share CC structural similarity with semaphorin proteins, protein/peptide hormones of the neurohypophysial family and oxytocin (neurophysin 1 precursor) rectanding. The NHP nucleotide sequences are useful in drug screening creating the normal function of NHP in the body. Nucleotide constructs are useful in gene therapy for modulating NHP products are useful in gene therapy for modulating NHP creations of constructs can be used to genetically engineer host cells function as bioreactors in the body delivering a continuous supply of a construct of also find use in molecular mutagenesis/evolution of proteins that are useful for generating antibodies, as reagents in diagnostic assays for screening for compounds that are useful in the treatment of sequences are useful in the treatment of sequences are contained as reagents. The present, the amino acid sequences of a NHP and as reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              601 VGSRLGVAQLRLHQCETYGTACAECCLARDPYCAWDGASCTHYRDSLGKRRFRRQDIRHG

                                                                                                                                                                                                       The present sequence is the sequence of a human secreted protein. Its cDNA was isolated from an adult brain cDNA library. The proteins and coding sequences of the invention can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo,

CC The invention relates to inverting numer secretary proteins, protein/peptide hormones of structural similarity with semaphorin proteins, protein/peptide hormones of contract of the neurohypophysial family and oxytocin (neurophysial 1 precursor) of family. The NHP nucleotide sequences are useful in drug screening constructs of techniques for treating symptomatic or phenotypic manifestations of contractions of the constructs are useful in gene therapy for modulating NHP constructs are useful in gene therapy for modulating NHP constructs in the body of the constructs in the body. The sequences function as bioreactors in the body delivering a continuous supply of a contract of a NHP fusion protein to the body. The sequences function as bioreactors in the body protein to the body. The sequences constructs in the body for the sequences of ind use in molecular mutagenesis/evolution of proteins that are constrainly encoded by the NHP sequences. The encoded NHP polypeptides are also find use in molecular sequences are also find use of the collular gene products related to NHP and as reagents of identifying other cellular gene products related to NHP and as reagents of constrainty in the cellular gene products related to the treatment of constrainty biological or medical discorders and diseases. The present of constrainty is provided to the polypeptides are sequence represents the amino acid sequence of a NHP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAG65620 standard; Protein; 782 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention is concerned with a number of secreted proteins and their coding sequences isolated from various human cDNA libraries. Similar genes and coding sequences can be used in the isolation of and to treat a number of conditions. It is possible that function in vivo, factors, in immune modulation, where they may be used to treat immune modulation, where they may be used to treat immune and laseases, as haematopolesis regulators (treating myeloid or lambor cell deficiencies), in the promotion of tissue growth, they may have chemokine or chemotactic activity. No information about sequences analyzadas is given in the snecification.

polynucleotide encoding ZSMF-16 useful for detecting genetic
```

xx
The present sequence represents a semaphorin polypeptide, designated CC ZSMF-16 is a neurite growth and development modulator. It also CC enhances spinal cord and sensory |neurite outgrowth and patterning, and CC enhances spinal cord and sensory |neurite outgrowth and patterning, and cC enhances spinal cord and sensory |neurite outgrowth and patterning, and cC zswF-16 is useful for detecting a genetic abnormality or cancer. ZSMF-16 cC zswF-16 | zswfulcation and regulation of I lymphocytes suppressor. CC polypucleotide probes can be used to detect 3p21 loss, trisony, and integrated a polypucleotide probes can be used with manmary tumour tissue, and conclude the concert of the cancer in the concert integrated with manmary tumour tissue, and concert timour, liver, small integrine, bone cancers, etc. zswF-16 can concert the concert integrated prowth and development and demarcate nervous concert timour, liver, small integrine, bone cancers, etc. zswF-16 can system structures. ZswF-16 are also useful for regenerating and directing concert timour, liver, small integrated by head concert timour, liver, small integrated by path and development and demarcate nervous concert timour, liver, small injuries, and for treating concert timour, liver, and concert timour, and disease and neurodegenerative disease, which is amyotrophic lateral sclerosis.

CC alzebemer's disease, Huntington's disease, parkinson's disease and concert timour, liver, and the concert timour, and the concert and thus useful for diagnosing and treating autoimmune diseases such as and thus useful for diabetes, rheumatoid arthritis, and multiple insulin dependent diabetes, rheumatoid arthritis, and for inhibition sclerosis. It can also be used as an antiinflammatory for inhibition of antigen in humoral and cellular immunity and for immunosuppression of antigen in humoral and cellular immunity and for immunosuppression

                                                                                                                                                                                                                    The present sequence represents human semaphorin, a nerve growth inhibitor. The semaphorin protein, and gene encoding the protein and their derivatives, are used in the diagnosis, treatment and study of neurological disorders such as atopic skin inflammation, autoimmune diseases and pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DЬ

xx mis is the mouse Semaphorin-H amino acid sequence (Sema H). The CC semaphorin/Collapsin family within a 500 amino acid semaphorin domain. CC and highly conserved motif, within a 500 amino acid semaphorin domain. CC and highly conserved motif, within a 500 amino acid semaphorin domain. CC and highly conserved motif, within a 500 amino acid semaphorin domain. CC and highly conserved motif inhibitory or repulsive functions in a neuronal cc context, and functions in bone structure formation are also implicated. CC context, and functions in bone structure formation are also implicated. CC the mouse Sema H gene in the diagnosis of metastatic cancer. Semaphorin cc is thought that Sema H plays a role in metastatic cancer. Semaphorin the mouse Sema H gene in the diagnosis of metastatic cancer is semaphorin, the polypeptides are used in the methods of the contential of cells, by sema H, are also useful therapeutically in cc potential of cells, by sema H, are also useful therapeutically in cc potential of cells, by sema H, are also useful therapeutically in cc milibiting sema H, polypeptide activity and therefore metastasis, and for cc milibiting the polypeptides. Metastasis may also be inhibited by a small cc milibiting the biological activity of the polypeptide expression in cc milibiting the biological activity of the polypeptide expression in cc consecuted and shown antisense technology e.g. to prevent metastasis of consecute sing known antisense technology e.g. to prevent metastasis of cancer cells. They can be used to detect and quantify Sema-H mrNN levels can be used to detect and quantify Sema-H mrNN levels of in cells. They consecute the secundary of the polypeptides can be used to included in cells. They can be used to detect and be included in the cells. They can be used to be consecuted the can be used to is $\frac{1}{2}\text{dete} \text{dete} \text{dete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-MAR-1998;

                                                                                                                                                                                                                                                                                           Lukanidin EM,
(Sema Hv). The Semaphorin/Collapsin family of molecules are characterised (Sema Hv). The Semaphorin/Collapsin family of molecules are characterised by a unique and highly conserved motif, within a 500 amino acid by a unique and sightly conserved motify thinibitory or repulsive by a unique and some semaphorins exhibit inhibitory or repulsive semaphorin domain. Some semaphorins within the semaphorin domain some semaphorin that sema H plays a role in functions in a neuronal context, and functions in bone structure formation are also implicated. It is thought that Sema H plays a role in
                                                                                                                                                                                     New polypeptides and polynucleotides, useful in diagnosis and treatment
                                                                                             This is the mouse Semaphorin H variant (Sema Hv) amino acid sequence
                                                                                                                                      Claim 7; Page 92-93; 95pp; English.

cc metastasis. The invention uses the mouse Sema H gene in the diagnosis of CC in the methods of the invention, the polypucleotides and polypeptides are used determining the metastatic potential of cells, by detecting their cc expression in biological samples. Antibodies specific for Sema H, are cc also useful therapeutically in inhibiting Sema-H polypeptides and ectivity and cc ligand (or fragment). The polypuctal activity of the stasis may cc polypeptide using e.g. a small molecule inhibitor or a Semaphorin-H cc prepent metastasis of cancer cells. They can be used to inhibit compositions and included in proteins, antibodies can also be used to inhibit cc multimeric proteins, antibodies or antisense technology e.g. to included in pharmaceutical compositions. The polypeptides, fusion proteins, compositions. The polypeptides can be used continued in the similar sequences from other species and to produce mammalian.

                                                                                                                                                                                                                             The present sequence represents a semaphorin. The specification describes hanatoxin-like sequences (HTLS) found in the semaphorin toxin that selectively blocks semaphorins. Hanatoxin is a tarantula and growth cone collapse activities associated with semaphorins. Polypeptides containing HTLS can be used to modulate the activity of calcium channels. The peptides can be used to modulate the activity of calcium channels that can then be used to modulate the activity of the peptides or antibodies that can then be used to modulate the activity of calcium channels by inactivating naturally occurring channel signads. The peptides can be used as an antigen to or disease that is characterized by abnormal calcium channel igands.

The proteins of the prasshopper semaphorin I (AAQ87441), human semaphorin I and encoded by the grasshopper semaphorin I (AAQ87441), Drosophila semaphorin I (IAQ87444-5), Tribolium semaphorin I (AAQ87447) or variola major (smallpox) virus semaphorin IV (AAQ87447) genes were used to generate a II (AAQ87444-5), Tribolium semaphorin I (AAQ87447) genes were used to generate a series of peptides (AAR70370-R70418), which retain semaphorin receptor derived series of peptides (AAR70370-R70418), which receptor in diagnosis and peptides are potent modulators of nerve cell growth, immune peptides are potent modulators of nerve cell growth, immune responsiveness and viral pathogenesis. They can be used in diagnosis and treatment of neurological disease and neuro-regeneration, immune modulation and diagnosis and treatment of viral and oncological infection and diagnosis and treatment of viral and oncological infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (REGC ) UNIV CALIFORNIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                O'Connor T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New class of semaphorin peptide(s) and polypeptide(s) - are potent modulators of nerve cell growth and regeneration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 1995-131177/17.

                                                                                                                                              The present sequence represents a semaphorin. The specification describes hanatoxin-like sequences (HTLS) found in the semaphorin domain of mammalian secreted semaphorins. Hanatoxin is a tarantula channels. The HTLS is responsible for the dorsal root ganglion repulsion and growth cone collapse activities associated with semaphorins. Polypeptides containing HTLS can be used to modulate the activity of calcium channels. The peptides can also be used as an antigen to generate antibodies that can then be used to modulate the activity of calcium channels by inactivating naturally occurring channel ligands. Or also as a set to reat any condition or also as a set to treat any condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, especial: cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's cancer and a wide range of neurodegenerative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Figure 16; 258pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              protein-C (HMGP-C) and neuroendocrine specific protein A.

The specification describes hanatoxin-like sequences (HTLS) found in the semaphorin domain of mammalian secreted semaphorins. Hanatoxin is a tarantula toxin that selectively blocks some voltage-gated potassium and calcium and growth cone collapse activities associated with semaphorins. The HTLS is responsible for the dorsal root ganglion repulsion calcium channels. The peptides can be used to modulate the activity of generate antibodies that can then be used to modulate the activity of calcium channels by inactivating naturally occurring channel negative to reputides or antibodies can be used as an antigen to calcium channels by inactivating naturally occurring channel negativity of the peptides or antibodies can be used as drugs to treat any condition or disease that is characterized by abnormal calcium channel function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               254 GSVESGRGRCPHEPSRPFASTFIDGELYTGLTADFLGREAMIFRSGGPRPALRSD-SDQS 312

Host cells transformed with vectors comperising the nucleic acids encoding the polypeptides are used for the recombinant expression of the polypeptides. The polypeptides can be used in treatment and basic studies, with wide applications in AAX89112-125 represent nucleic acids encoding the polypeptides.

                                                                                                                                                                                                              AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                   New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions
                                                                                                                                                                                                                                                                                                                                               Claim 12; Fig 176; 773pp; English.
